SUMMARY

Multiple contributions to Google products like Maps, Auto and Ads.
Expertise in developing ML driven ranking algorithms and AI applications.

EXPERIENCE

Google, New York — Software Engineer

July 2024 - November 2025

AI Mode (Backend / Gen AI)

- Worked on fulfilling complex directional queries using GenAI tools and Maps Apis

March 2022 - November 2025

Maps Quality (Backend / Ranking)

- Built distributed pipelines for collecting data and trained Deep Neural Network models to improve Maps ranking
- Worked on making Maps ranking pipelines policy and privacy compliant according to DMA 5(2)

January 2020 - March 2022

Google Assistant, Android Auto (Backend / On-device)

- Updated Google's on-device Natural Language Processing models to understand directional and local search queries.
- Used Google's on-device server infrastructure to query stored maps on the user's device to fulfill offline user requests.

Google, California — Software Engineer

July 2016 - January 2020

Ads Quality and Security (Backend)

- Migrated large amounts of ads data on Google's bigtable using Flume mapreduce pipelines.
- Created and owned an RPC service that implements a rule engine and is used by Adwords, AdwordsExpress and AdsAPI.
- Collected metrics and set up alerts to monitor system performance.

Google, New York— Engineering Resident

July 2015 - July 2016

Hiring Applications (Full Stack)

- Worked on productionisation of Google's new innovative hiring solutions using Google Web Toolkit (GWT), CSS and HTML.

EDUCATION

MS in Electrical and Computer Engineering

University of Florida

August 2013 - May 2015

BTech in Information and Communication Technology

Dhirubhai Ambani Institute

August 2009 - May 2013

SKILLS

Languages : C++, Java, Python, SQL, GCL

Tools : VSCode, Kiro, Google Colabs, Jupyter, Google Web Toolkit (GWT), Git, Vim

Database Technologies :
Google's Bigtable, Spanner, Flume, MapReduce; Apache's Storm, Kafka;
